BUILD SEASON WEEK 3

During the third week of our build season, we completed the last bits of our CAD. We finished testing our mechanisms, and some (such as the drivetrain) were almost completely built.

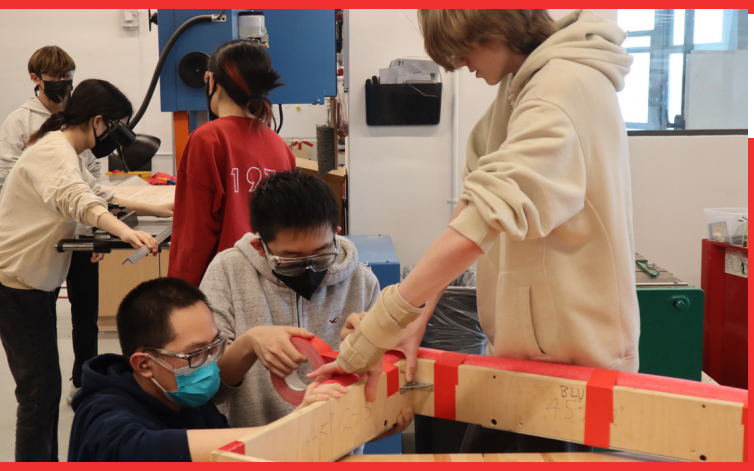

BUILD SEASON WEEK 4

All of our groups got to work on the building itself. All of our mechanisms—Engage & Plant, Intake, Lift, Wing, and Drivetrain—were slowly but surely nearing completion.

FEBRUARY NEWSLETTER

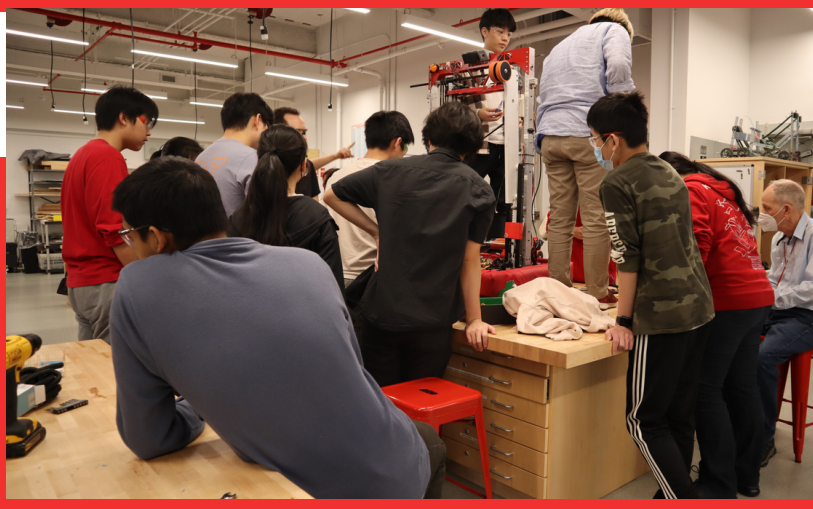

BUILD SEASON WEEK 5

We finished building all our mechanisms! The pistons and wiring were also mostly done, thanks to the work of Electronics and Pneumatics, and we began testing our code on the robot.

BUILD SEASON WEEK 6

During week six, Software Engineering was making the finished touches on code. Our driver, Ben Goldfisher, got in some practice with our robot. The bot was practically finished and ready to go!

STUYPULSE VISITS REDDIT!

We had a blast visiting Reddit! Thanks to our mentor, Mrs. Mary Ann Belliveau, we were able to have this opportunity to ask questions about how businesses in the real world operate.

We learned a lot, including how to divide and conquer tasks, ensure that people meet deadlines, and more. Thanks to this meeting, our business department is rejuvenated with new outreach and finance ideas!

UPCOMING EVENTS
