Open House Robot Demo

To introduce incoming Stuyvesant freshmen to StuyPulse, we did an Excelsior demo at the Open House! Drivers tested the robot while other team members walked around, answering questions. These demonstrations were a long-lasting tradition, temporarily disrupted due to the pandemic. We're glad that we can finally do it again this year.

Battlecry

We attended Battlecry from June 4 to June 7! This was a great opportunity to test out new drivers, as we wanted them to understand the pressure of driving in a real competition.

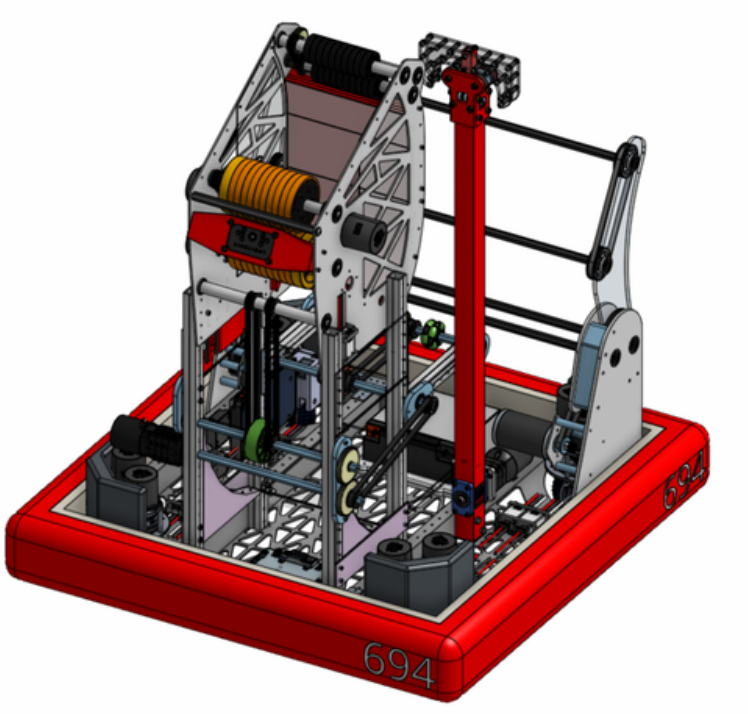

Even though we didn't win, we had a fun time!

Current Projects

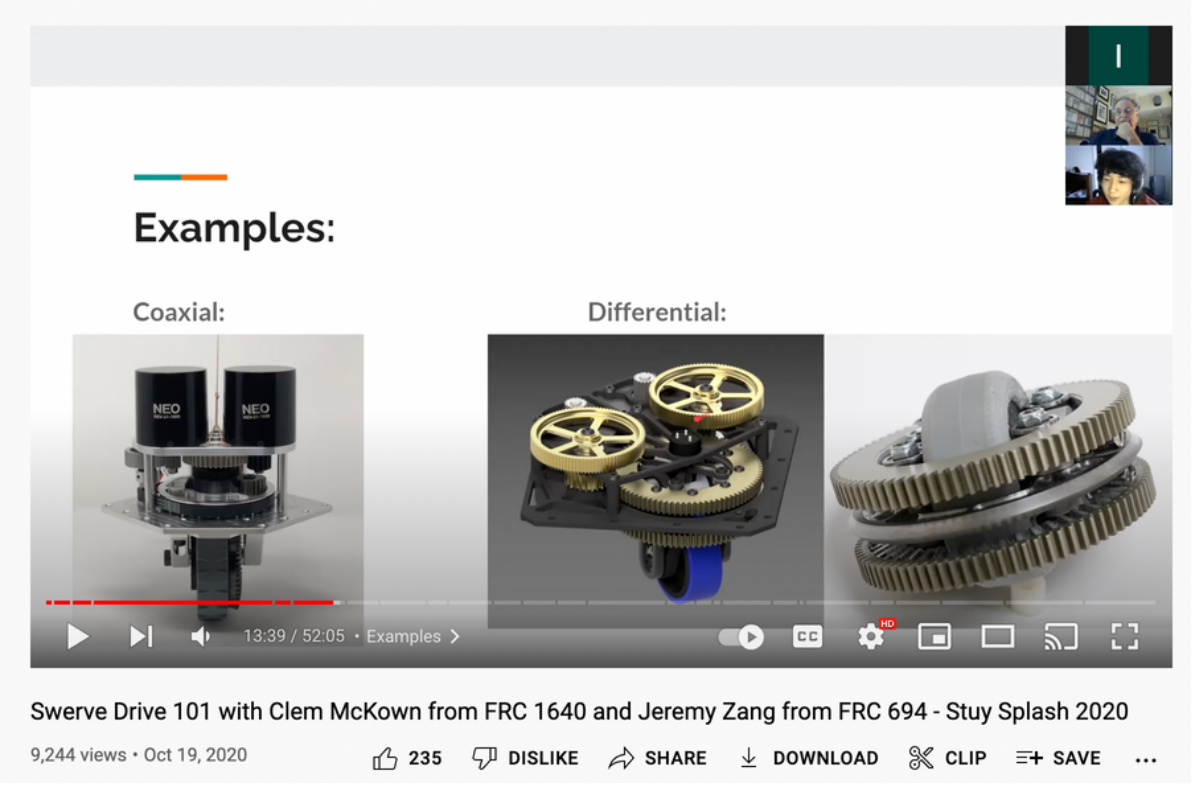

Offseason Bot

By playing so many games and talking with so many teams, we learned a lot during this season. So for our offseason bot, Dorcas, we're going to use that newfound knowledge to fix design flaws. For example, one of our major goals is to make our robot short enough to fit under the low rung.

Swerve Development

We are also going to implement some long-term projects into this offseason bot--that is, the swerve drive. There have been many prototypes, successes, and failures; now, we're finally ready to make the real thing.
