December 2019

Stuy Splash

Every December our team hosts Stuy Splash, an intensive camp for FRC, covering everything from the foundation of your robot to the 0's and 1's that make it overweight. Modeled after the wildly successful CSplash and MIT Splash events, Stuy Splash is designed to aid newer teams in whatever area they are having trouble. This year, we had presenters from our own team as well as from our friends, teams 771, 5599, 25, 865, 271, etc. covering a wide range of topics from leadership to electronics.

Upcoming Events

2020 FIRST Kickoff: On January 4th, the FIRST Robotics Competition will be live on Twitch explaining the robotics game this year. Our team gathers together at our school to watch the stream while formulating strategies for the rest of the season.

Newbie Bonding Event

Every December, our team hosts a newbie bonding event to help new members fit into the team. During this event, veteran members and mentors played multiple games with new members. These games helped newbies express their creativity and allowed them to get to know others from different departments. Whether it be Engineering, Software Engineering or Marketing, this event united members from all these departments. Below are some of the photos taken of the event!
